EMC TEST REPORT

According to FCC CFR47 Part 18 Subpart C

JOB Number : LBE031048

1. *This test reports does not constitute an endorsement by NIST/NVLAP or U.S Government.*
2. *This test report is to certify that the tested device properly complies with the requirements of FCC Rules and Regulations Part 18 CFR47 Subpart C Intentional Radiators. All tests necessary to show compliance to the requirements were and these results met the specifications requirement.*

This laboratory is registered by the NIST/NVLAP, U.S.A. The test reported herein have been performed in accordance with its terms of registration.

NVLAP LAB CODE 200447-0

1. Applicant Name : SAMSUNG ELECTRONICS CO., LTD.
416 Maetan 3 Dong, Paldal-Ku, Suwon City, Kyungki Do, Korea, 442-742

2. Identification of tested device

2.1 FCC ID : A3L5TH930
2.2 Device Name : MICROWAVE OVEN
2.3 Trade Name : SAMSUNG Electronics Co.,Ltd.
2.4 Model Number : MW930WC
2.5 RF Output Power : **900** W (by IEC 705 method)

3. Test Procedure and Items

3.1 FCC/OST MP-5 : 1986

4. Issued Date : May 14, 2003

Tested by:
Jay Yong, PARK / Test Engineer

Reviewed by:
No Cheon, PARK / Manager of EMC Lab.

Authorised by:
Kyu Baek, CHUNG / Chief of EMC Lab.

TABLE OF CONTENTS

1. Product Description

The equipment under test is a microwave oven sold for consumer use.
Model : MW930WC is a 900 W microwave oven with digital controls.
Installation Type: Count-Top
Clock Frequency : 8.0MHz

< Magnetron >
Model : OM-75P manufactured by Samsung Electronic Co., Ltd.

2. Test Facility

The Semi-anechoic chamber and Conducted measurement facilities used to collect the radiated data are located at 416 Maetan 3 Dong, Paldal-Ku, Suwon City, Kyungki Do, Korea.
The sites are constructed in conformance with the requirements of ANSI C63.4 and CISPR Publication 22.

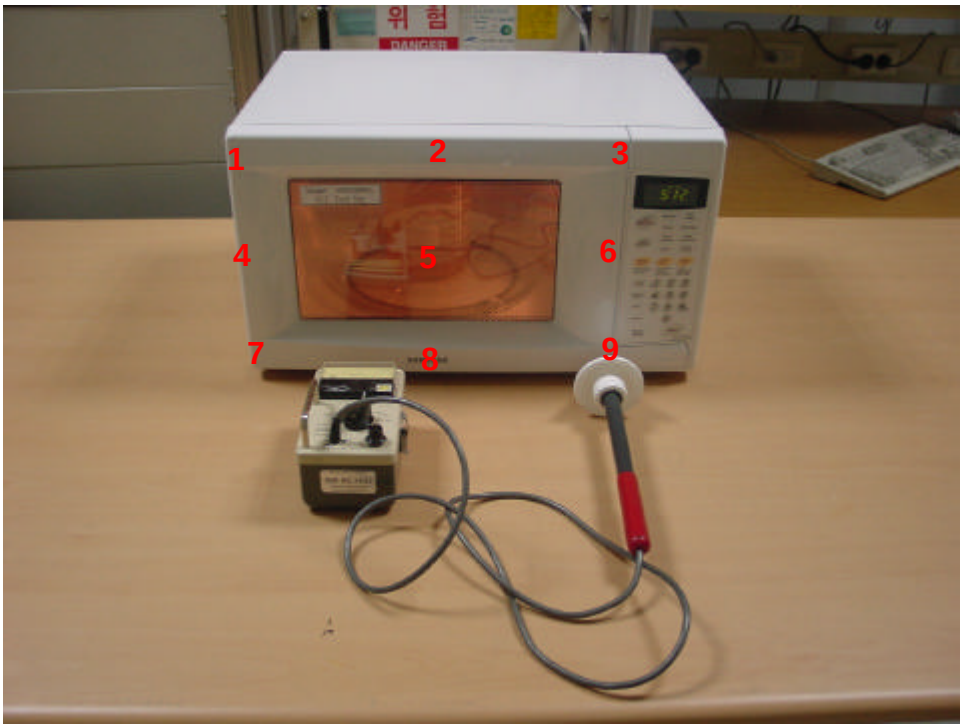
3. Accreditation and Listing

The test facilities used to perform radiated and conducted emissions tests are accrediated by National Voluntary Laboratory Accreditation Program for the specific of accreditation under Lab Code: 200447-0 to perform Electromagnetic Interference tests according to FCC PART 15 and CISPR 22 requirements.
No part of this report may be used to claim or imply product endorsement by NVLAP or any agency of the US Government. In addition, the test facilities are listed with Federal Communications Commission(Registration Number:98856, Anechoic Chamber #1).

4. Radio Noise Emission Measurement Procedures/Results

4.1 Radiation Hazard Measurement

A 700-ml water load was placed in the center of the oven.
The power setting was set to maximum power.
While the oven was operating, the Microwave Survey Meter probe was moved slowly around the door seams to check for leakage.



The results of this test are as follows.

Probe Location	Maximum Leakage [mW/Cm2]	Limit [mW/Cm2]
3	0.05	1.0
5	0.05	1.0
8	0.10	1.0
All others	0.05	1.0

4.2 Input Power Measurement

Input power and current were measured using a Power Analyzer.
A 700ml water load was placed in the center of the oven and the oven set to maximum power. A 700 ml water load was chosen for its compatibility. Manufacturers to determine their input ratings commonly use this procedure.

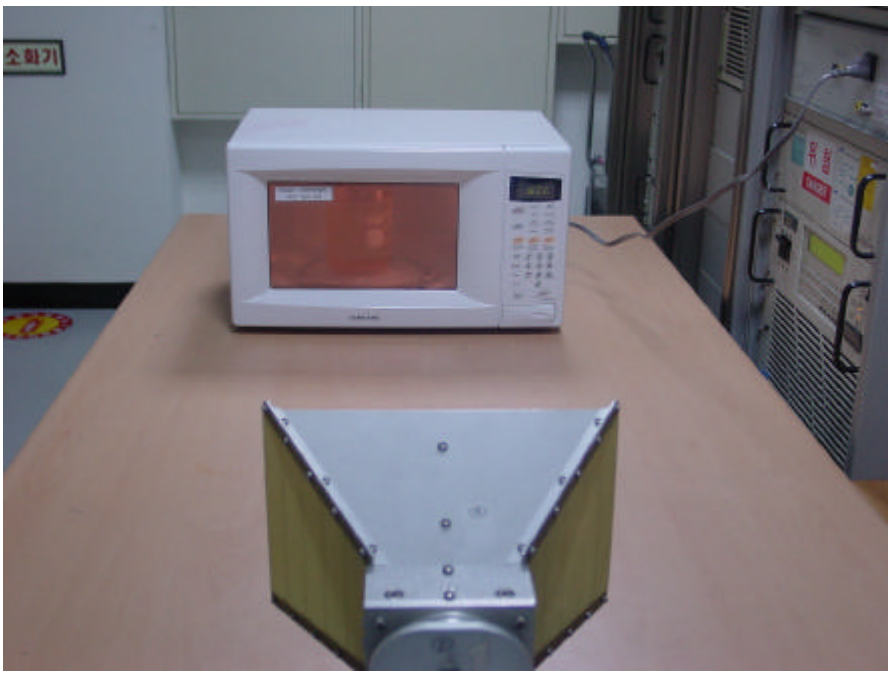


Fig. 2 Test Setup for Input power

The results of this test are as follows.

Input Voltage [Vac]	Input Current [amps]	Measured Input power [watts]	EUT Spec. Input power [watts]
120	12.3	1360	1350

Based on the measured input power, the EUT was found to be operating within the intended specifications.

4.3 RF Output Power Measurement

The Caloric Method was used to determine maximum output power.
The initial temperature of a 1000-ml water load was measured. The water load was placed in the center of the oven. The oven was operated at maximum output power for 120 seconds. Then the temperature of the water re-measured.

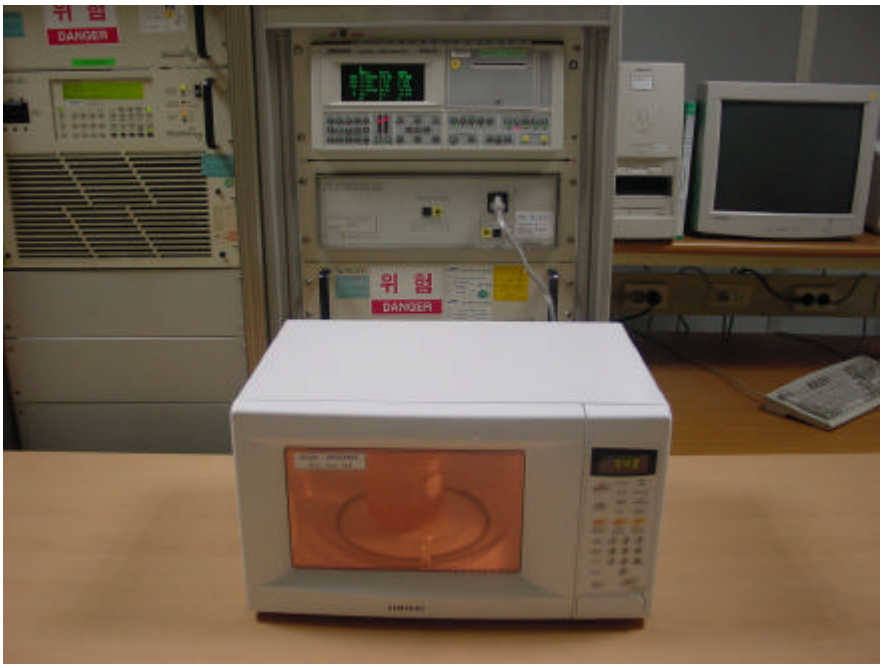

Fig.3 Test Setup for RF output power

Quantity of water [ml]	Starting Temperature [centigrade]	Final Temperature [centigrade]	Elapsed Time [seconds]	RF Power [watts]
1000	10	30.5	120	715.3
1000	10	30.3	120	708.3
1000	10	30.3	120	708.3
Average RF Power of 3 Trials				710.6

$$\textbf{\textit{Power}} = \frac{\textit{(4.187 Joules/Cal) x (Volume in ml) x (Temp. Rise)}}{\textit{Time in seconds}}$$

The measured output was found to be **ABOVE 500Watts**. Therefore, in accordance with section 18.305 of Subpart C, the measured out-of-band emissions were compared to the 25xSQRT(power/500)[uV/m] @ 300M limit.

4.4 Operation Frequency Measurement

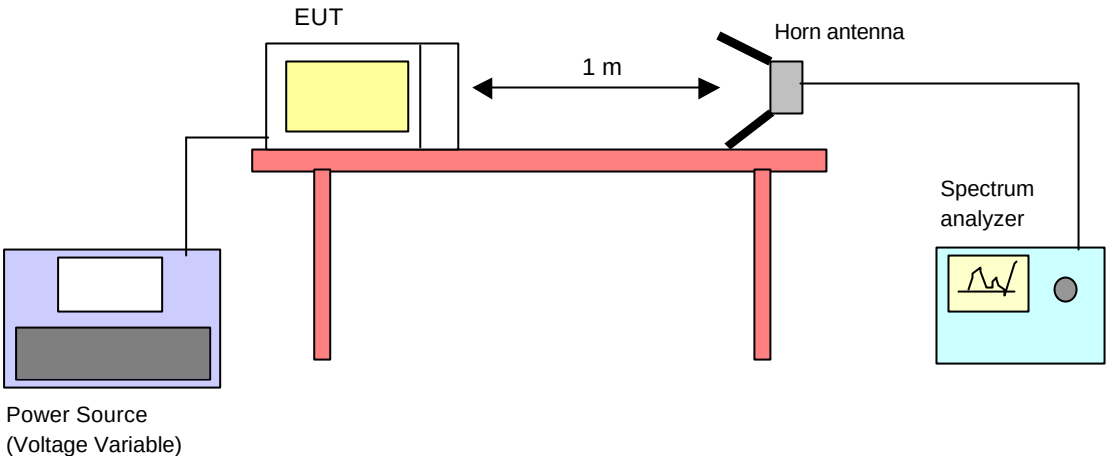

Fig. 4 Operating Frequency Measurements Configuration

4.4.1 Frequency Measurement

Following the above test, after operating the oven long enough to assure that stable operating temperature were obtained, the operating frequency was monitored as the input voltage was varied between 80 to 125 percent of the nominal rating.

The water load was maintained at 200 ml for the duration of the test.

The results of this test are as follows.
Line voltage varied from 96Vac to 150Vac.

Initial load : 1000 ml water in the glass beaker

(1) Frequence vs Line Voltage Variation Test

[Room Temperature : 22.5 ℃]

Line Voltage Variation (V)	Frequency (MHz)		Allowed Tolerance for the ISM Band (2450MHz)
150 (125%)	Lower :	2406	Lower: 2400 MHz Upper : 2500 MHz
	upper :	2494	
132(110%)	Lower :	2405	
	upper :	2489	
120 (Nominal)	Lower :	2403	
	upper :	2492	
108 (90%)	Lower :	2406	
	upper :	2492	
96 (80%)	Lower :	2407	
	upper :	2464	

Result : PASSED

(2) Frequence vs Load Variation Test

Initial load : 1000 ml water in the glass beaker

[Room Temperature : 22 ℃]

Volume of Water (cc)	Frequency (MHz)		Allowed Tolerance for the ISM Band (2450MHz)
1000	Lower :	2403	Lower: 2400 MHz Upper : 2500 MHz
	upper :	2492	
800	Lower :	2406	
	upper :	2496	
600	Lower :	2404	
	upper :	2486	
400	Lower :	2415	
	upper :	2465	
200	Lower :	2412	
	upper :	2463	

Note : Friquency was measured by using nominal voltage (AC120V)

Result : PASSED

4.5 Radiated Emission Measurement

4.5.1 Radiated Emission Measurement Procedure

Radiated emission were measured over an inclusive frequency range to 30MHz through the tenth harmonic of the operating frequency. For this test, a 0.8-meter high wooden table in a semi-anechoic chamber supported the device under test. The table was placed on a turntable.

The measurement antenna was placed 3 meters for measurement from 30 to 1,000MHz and 1 meter for measurement from 1 - 25GHz, respectively, for the device under test. The indicated frequency range was swept as device under test was rotated along its vertical axis in 90 degree increments.

During the preliminary tests, the load consisted of 700-ml tap water placed in the center of the oven. The emissions were observed while the device under test was operated at maximum output power.

The level of the emissions near the edge of the designated ISM frequency band was measured. For this test, the load consisted of 700-ml water load located in the center of the oven.

The level of the second and third harmonic were measured inclusively with a 300-ml and 700-ml water load alternately placed in the center and side(or right front corner) of the oven.
The data obtained during these tests is contained on this report.

All other out-of-band emissions were measured while a 700-ml load was placed in the center of the oven. Maximum readings were recorded after variations in antenna polarizations, height, device orientation, load position, and size.
For frequencies above 1GHz, the test receiver detecting mode was set to average detection mode(Model no.:ESI , Rohde & Schwarz).

For all emissions the equivalent 300 meters intensity was calculated assuming linear decrease in the described, there were no over-limit emissions discorvered.

2714	40.2	30.4	41.3	0	0.0069	0.20	29.49	V	-29.28
4926	41.5	35.8	42.0	1	0.01	0.65	29.49	V	-28.83
5427	43.8	36.7	42.0	1	0.01	0.94	29.49	V	-28.54
7381	43.5	39.4	41.5	1	0.01	1.32	29.49	V	-28.16
9131	41.2	40.7	41.7	1	0.01	1.14	29.49	V	-28.34
12067	39.5	42.3	40.7	1	0.01	1.28	29.49	V	-28.21
15267	39.9	43.8	42.5	1	0.01	1.29	29.49	V	-28.20

*** fo = 2450MHz**

* ***Total Loss*** *: Antenna Factor+ Cable Loss,* ***HPF*** *: High Pass Filter(4.5GHz)*

* ***AMP*** *: Pre-amplifier*

* *The limit at 300 meters is 20 * LOG (25 * RF Power/500)*

* *Results : Field Strength abobe 1000MHz (at 300m)(uV/m) = K*10* $^{[Field\ strengh\ at\ 3m(dBuV/m)/20]}$

* *Margin = Result-Limit*

[NOTE]

1. Load for measurement of radiation on second and third harmonic : Two loads, one of 1000ml and the other of 450ml, of water were used. Each load was tested both with the beaker located in the center of the oven and with it in the corner.

* *k : Conversion Factor*

*K = 0.0137 * logF - 0.0401 (if F $<$ 4575 MHz)*

K = 0.01 (if F $\geq$ 4575 MHz)

F = Meter Reading Frequency
