Questions Regarding FCC ID: A3LSCHE159(EV-DO)

Gentlemen:

EV-DO functionality does not include voice transmission, but is data-only. Therefore, during normal operation it will not be employed while the phone is worn on the body, but only while it is held in the hand. As a result, SAR testing is not necessary for EV-DO modes of operation, since handheld devices are considered mobile devices with respect to RF exposure conditions.

If you have any questions regarding this matter, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in cursive script that reads "h. l. Lee".
