Correspondence Reference No.: 21057
Request for Tech. Info.: 10/25/01**

Dear Stan:

Transmitted herewith, on behalf of **Samsung Electronics Co., Ltd.** is an amendment provided in response to the request for technical information dated October 25, 2001.

1. The level readings in column two on pages 8-10 are the receive spectrum analyzer readings in dBm taken at a distance of 3 meters during the ERP test. The signal generator driving the substituted dipole was adjusted to produce this same meter reading. The level at the input terminals of the substituted dipole was then measured and the ERP value was recorded.
2. As stated in item #1 the levels in column two of pages 11-19 are maximum receive spectrum analyzer readings in dBm taken at a distance of 3 meters.
3. Please find the attached plot of the voice modulation occupied bandwidth taken at 2500 Hz and SAT + audio plot.
4. Please find the attached the revised SAR Test Data Sheet.
5. Please find attached the revised cover pages for the SAR Test Report.
6. We would like to inform you that Samsung has confirmed that there is no additional antenna available at this time. Please find attached the revised users manual.
7. All noted, we have deleted the sample calculation of ERP from the field strength from future applications (see attached).

We trust this information is sufficient for the immediate grant of this application. If you have any further questions, please do not hesitate to contact us.

Randy Ortanez
President
