

FCC ID A3LSGHR225

The conducted output power was re-measured using exact calibrated cables, attenuators and adapters. This measurement does not effect the results of the other parameters. The radiated power (EIRP) was measured using the substitution method and not calculated from the conducted power measurements.

This table replaces the table in page 7 of the original report.

The EUT was set up for the max. output power with pseudo random data modulation.
The power was measured with R&S Spectrum Analyzer FSEM 30 (peak and average)
This measurements were done at 3 frequencies, 1850.2 MHz, 1880.0 MHz and 1909.8 MHz
(bottom, middle and top of operational frequency range)

Limits:

Power Step	Nominal Peak Output Power (dBm)	Tolerance (dB)
0	+30	± 2

Power Measurements:**Conducted:**

Frequency (MHz)	Power Step	Peak Output Power (dBm)	Average Output Power (dBm)
1850.2	0	29.90	20.65
1880.0	0	29.80	20.55
1909.8	0	30.1	20.85
Measurement uncertainty		±0.5 dB
