Declaration Letter of RF Exposure

To Whom It May Concern:

The WLAN average output power is as below:

- 2 412 MHz: **14.48 dBm** < $300 \times [2.412] - 0.5 \text{mW} \approx 193 \text{mW} \approx 22.86 \text{ dBm}$
- 2 437 MHz: **14.61 dBm** < $300 \times [2.437] - 0.5 \text{mW} \approx 192 \text{mW} \approx 22.83 \text{ dBm}$
- 2 462 MHz: **14.17 dBm** < $300 \times [2.462] - 0.5 \text{mW} \approx 191 \text{mW} \approx 22.81 \text{ dBm}$

SAR is not required based on the output being below the threshold of $300 \times [f(\text{GHz})] - 0.5 \text{ mW}$ according to KDB447498.

Best Regards
