Re: FCC ID: AZ489FT7004
Applicant: Motorola, Inc.
Models: F4415A, VA00052AA

Gentlemen:

Spectrum Technology, Incorporated has tested the above referenced HDT 600, hand held terminal which contains two co-located transmitters. The measurements were made in accordance with the applicable requirements contained in the Parts 2, 15 and 90 of Title 47, CFR. To the best of my knowledge, these tests were performed using the criteria established in ANSI, TIA, FCC or other Industry standards.

The measurements demonstrate that the "new" Bluetooth Intentional Radiating device, complies with the limits established in Part 15.247 for FHSS devices. Supplemental measurements of the previously Certified transmitter, FCC ID: PQS-BM28001, operating under Part 90 confirm that the transmitter continues to comply with the established limits. The digital device emissions were also measured and found to meet the Part 15.109, (a) limits applicable to Class B devices. The applicable rule sections are listed in the test reports contained in Exhibit 6.

The open area test site used for the radiated emissions measurements is located at Fluke Park II in Everett, Washington. The site information required by Part 2.98, measured in accordance with ANSI C63.4-1992, was most recently renewed with the FCC and accepted by the FCC Sampling and Measurements Branch in August of 2001.

This site is also acceptable to Industry Canada for the performance of radiated measurements. Test site information required by RSS-212, Issue 1 (provisional) was most recently renewed with IC in January 2002. The site file number is IC 2089.

Sincerely,

A handwritten signature in cursive script that reads "Rod Munro".

Rod Munro
