Jacob, I will keep the application in pending status and await the additional test information.

Best regards,

Chris Harvey

Hi, Chris !!

Thank you for your kind advice.
I made a mistake.... I'm sorry to trouble you.

As I think, we may get the verification about TV part.
But, I'll re-test the other input ports with signal source as like VCR.
And we have used USB ports by computer mouse or the other peripherals.

I'm very sorry again.
I'll re-apply to you when the test finish.

Best Regards
Jacob

Jacob, this LCD monitor seems to have many capabilities that were not tested or included in the test report. There are inputs for TV, V1 (composite), V2 (S-Video) and HDTV, and USB (and possibly others), as well as outputs for headphones and Line out. This EUT also seems to have a TV tuner as it has the ability to change channels. It appears as though there are many ports that were not configured during the testing and many features/functions that

were not operating during the testing.

It appears that the testing is not complete for this device. Please address these items (and any other untested features by testing or detailed explanation as applicable.

Best regards,

Chris Harvey
