Hello Mike,

Below is the reply from LG to your questions:

Question #1: The max. measured SAR value as indicated in the SAR test report is : head :1.26 W/kg and Body:0.773 W/kg. These values do not agree those values listed in the page 86 of user manual (head :1.32 W/kg; Body:0.686 W/kg). Please make necessary correction.

-> I corrected that. I deleted that part.

Question #2: As indicated in the SAR test report, this phone was tested with 1.5 cm space gap. However, in the page 15 of user manual indicated that this device will be sold with holster. Please provide a photo of holster and indicate on thickness of holster on the photo.

-> I corrected that. We do not offer holster.

Question #3: As indicated in page 14 of user manual, this phone will be offered to use with two type of batteries. In the SAR and EMC test report, only one battery was tested. Please provide separate EMC and SAR body worn test data for another battery.

-> I corrected that. We do not offer extended battery.

Best Regards.

Chris Lee
