Subject: Manufacturer Attestation of RF Output Power Limitation

This letter is provided to clarify the transmit power for the Bluetooth module BGM240PB, bearing FCC ID: QOQ-GM240P, which is integrated into our product with FCC ID: 2ALZSKR210K.

The RF output power of this module is firmware controlled and permanently limited. The maximum conducted output power is restricted to +8 dBm by firmware and cannot be increased by the end user, integrator, or through any software configuration accessible outside of the manufacturer's controlled firmware.

This firmware-based power limitation ensures continued compliance with FCC regulations under all normal operating conditions. Any modification to the firmware that affects RF parameters can only be performed by the manufacturer and would require re-evaluation for FCC compliance.

Sincerely,

Jaimie Crafton

Senior Systems Engineer
