

- b. The Theory of Operation lists potential 802.11n(40 MHz) operation, as well as classic BT BR/EDR operation, in addition to BLE, however, these modes have not been tested for compliance. If they will be available in the EUT, please provide the required test data for these modes. If they will be disabled in the EUT, please revise the Theory of Operation to make this clear.

Response: The referenced channels are not available on this device application and are not used.

- d. Please revise the Theory of Operation to also specify if WiFi channels 12 and 13 are available, or if they are disabled in the EUT. I note that testing was only performed up to channel 11.

Response: Channels 11 and 12 are not available on this device application and are not used.
