1. Project Image

The final verification antenna performance prototype in our company for at least one year, easy to analyze and solve the problem of antenna mass production, to ensure the quality of antenna shipment

## 2.Test Fixture

Objective: to test the passive parameters of antenna as accurately as possible. Making  
Method: the handset is made of a 50 ohm coaxial cable, one end of which is connected to the test point of the back end of the matching circuit of the handset motherboard (front end of the RF test hole) , and the other end is connected to the SMA joint. The diagram is as follows:

## 3、 Antenna matching circuit

Note: The match is unmodified.

## 4.S11 test

4.0 4.0s11 test method description of test equipment: Network Analyzer (E5071C) test  
method: a 50 ohm CABLE is used to export from the instrument test port. The SMA  
connector for connecting the handset is calibrated using a calibration piece, record the  
echo loss and standing wave ratio corresponding to the relevant frequency points. The  
test schematic is as follows:

Address: 402TEL: 0755-23203435fax: 0755-23203435, Block C, Juxin Science and  
Technology Industrial Park, Nanchang community, xixiang, Baoan District, Shenzhen

| Freq(MHz) | Efficiency(%) | Gain(dBi) |
| 5000      | 50.25         | 1.22      |
| 5100      | 51.12         | 1.15      |
| 5200      | 52.36         | 1.37      |
| 5300      | 49.85         | 1.05      |
| 5400      | 47.44         | 1.01      |
| 5500      | 48.21         | 1.14      |
| 5600      | 54.21         | 0.98      |
| 5700      | 54.23         | 0.85      |
| 5800      | 53.12         | 1.08      |
| 5850      | 54.31         | 1.01      |

## 6. Test Equipment

Test system: shielded darkroom

The temperature was  $22^{\circ}\text{C} \pm 3^{\circ}\text{C}$  and the humidity was  $50\% \pm 15\%$

Test equipment: when testing passive data, use the Network analyzer AGILENTE5071C to test active data, use the omnibus CMW500

and  
nzhn

## 7. Antenna environment handling

## 8. Antenna mass production index

When the antenna is mass-produced, the standing wave ratio is taken as the mass-produced test standard.

Based on the differences of the project itself, the following criteria are given:

|                   |                                                                               |
|-------------------|-------------------------------------------------------------------------------|
| Frequency         | Standard for volume production                                                |
| 2400 MHZ -2500MHZ | VSWR (Mass Production performance) & LT;<br>VSWR(recognition performance) 0.5 |

9.Structural drawings
