

According to 447498 D04 Interim General RF Exposure Guidance v01 section 2.1.2, the available maximum time-average power not exceeding 1 mW is exempt from the test.

Average EIRP power: -21.18 dBm (≈ 0.01 mW) at 3 m field strength 74.05 dB μ V/m.

This product is exempt from testing because its maximum time-averaged power does not exceed 1 mW.

Note:

1. The maximum time-average power is based on the average electric field strength reported in test report TMWK2510004549KR, for the purpose of SAR test exclusion.
